**Daily Question #14**

**Spring 2013**  
**March 27**

The *IS* curve (both kinds), the *LM* curve, and Romer's *MP* curve (introduced on p. 262) are all drawn in  $(Y, r)$  space. What variables are held constant in drawing each of the four curves? How does a shift in each of these variables shift the relevant curve?
