Daily Question #15

Spring 2014
March 3

Consider Reed's "productivity" in producing educations with labor and capital resources. In contrast to three decades ago, Reed now has several dozen staff members working in the "computing and information systems" offices and has invested in many hundreds of machines (computers, printers, projectors, etc.). Yet Reed produces about the same number of educations each year.

Does information technology improve Reed's productivity? Discuss!
