<b>9.0 References</b>	<b>7</b>
<b>Appendix 1: Health Hazard Definitions</b>	<b>8</b>

## 1.0 Purpose and Scope

The Hazard Communication Program applies to all employees, students and contractors exposed to hazardous chemicals. Under this program employees are informed of the contents of the OSHA Hazard Communications Standard, the hazardous properties of chemicals with which they work, safety handling procedures, and measures to take to protect themselves from these chemicals.

Contractors working in areas where no Reed College personnel are present, e.g. new construction and renovations, will provide their own Hazard Communication Program for their employees. If applicable, in the case where contractors work in areas where Reed personnel are present, Reed College will provide contractors with:

- A list of chemicals used in that area.
- Access to Safety Data Sheets (SDSs) for those chemicals, this would entail sharing a link to our [online chemical inventory system](#).
- Specific safety training for the chemicals to which they may be exposed.
- A copy of this program.

## 2.0 Responsibilities of Positions

### 2.1 Environmental Health and Safety Department (EHS)

- Maintains this program and ensures that it is available and up to date on the [EHS website](#).
- Preserve records of all hazardous chemicals used by Reed College for 30 years.
- Provide information to Reed College contractors pertaining to hazardous materials present at their work site.
- Monitor chemical hazard determinations to reasonably assure that, when conducted, they are performed following the requirements of the Hazard Communication Rules, OAR Chapter 437, Division 2, Subdivision Z.

### 2.2 Reed College Administration

- Provide commitment, leadership, and financial resources to support this program.
- Assist in full compliance with all federal, state, and local regulations concerning employee health and safety.
- Provide reasonable assurance that all provisions of the program are met.

### 2.3 Supervisors

- Train new employees on this program before they begin their duties.
- Maintain records of employee training.
- Evaluate the effectiveness of training by observing employees' safe workplace practices.

- Provide additional safety training to employees whenever a new health or physical hazard is introduced into their work area, and whenever necessary.
- Keep the list of hazardous chemicals up-to-date including any new hazardous chemicals added to the work area.
- Supply the EHS with a current copy of all SDSs for those products used by employees.
- Check frequently to make sure that all containers in the area have complete labels with the exact identifier name as on the SDS.
- Train new employees on how to access SDSs and make the department's hazardous chemicals list readily available for employee review during all work shifts.

## 2.4 Affected Employees

- Participate in the Reed College Hazardous Communication Program by understanding the safety and health requirements and practicing them in the workplace.
- Learn the properties, hazards, and safety measures pertinent to the materials and equipment in their department.
- Review the SDSs as necessary to minimize exposure to hazardous chemicals.
- Notify their supervisor of unsafe acts or conditions related to hazardous chemicals or other health hazards.
- Inform their supervisor when an SDS is not easily found.

## 3.0 Container Labeling

### 3.1 Primary Containers

All hazardous chemicals at Reed College must have warning labels securely attached to their containers. The labels must be prominently displayed, clearly legible, and in English (and may have other languages as needed). Labels must include the following information on the primary container:

- Identity of the hazardous chemicals contained therein. The chemical, trade, or product name (no abbreviations), must correspond to the specific Safety Data Sheet (SDS) with the same name.
- Appropriate hazard warnings. The warning must be a word, symbol, picture, or combination that provides at least general information regarding the physical or health hazards of the chemicals.
- Manufacturer or other contact information in case of spill, emergency, or other incident.

### 3.2 Secondary Containers

The same labeling requirements apply to repackaged hazardous chemicals as primary containers. The label must have the chemical name – no abbreviations – appropriate hazard warnings, and the name and the department of the preparer.

### 3.3 Temporary Containers

Labeling is not necessary when transferring a chemical into a temporary container for immediate use, (within the work shift or laboratory period). Label any remaining material at the end of the work shift or laboratory period.

### 3.4 New Chemicals

#### **Simple mixtures**

Any new chemical formed by mixing two or more hazardous chemicals and intended for use by someone other than the preparer, must have a primary label. The preparer must then assess the hazards and prepare an SDS for the new chemical. Contact the Environmental Health and Safety Office (ext. 7788) for instructions on how to evaluate the hazards of the chemical.

#### **Chemical combinations**

Any new chemicals formed by the chemical reaction of two or more hazardous chemicals and intended for use by someone other than the preparer, must have primary labels. The preparer must then assess the hazards and prepare an SDS for the new chemical. Contact the Environmental Health and Safety Office (ext. 7788) for instructions on how to evaluate the hazards of the chemical.

## 4.0 Safety Data Sheets

Copies of Safety Data Sheets (SDSs) are on file for all hazardous chemicals found on campus. Each department will have access to SDSs for each hazardous chemical located in their area. These SDSs must be available for review by employees during each work shift. You may obtain an SDS for any chemical on campus by emailing or calling EHS, searching EHS's SDS database on the [Reed EHS webpage](#).

In order to make sure that a complete set of SDSs is maintained on campus at all times, departments will forward a copy of the SDS to the Environmental Health & Safety Office when a product is added. The manufacturer of hazardous chemicals will supply a copy of the SDS for each of their products and are available by request from the manufacturer or supplier.

Employees need to understand the following information regarding chemicals used in their work area:

- Name and hazardous characteristics of the material.
- Physical and health effects of the hazardous material, including target organ effects (see Appendix for definitions).
- Personal Protective Equipment used to prevent or decrease exposure to the hazardous material.

In 2012, the Occupational Safety and Health Administration (OSHA) standardized the content of safety data sheets (SDSs) and required the use of pictograms, signal words, and statements that identify hazards and precautions. MSDSONline can be accessed [here](#).

#### 4.1 SDS 16-Section Format

- Section 1, Identification includes product identifiers; manufacturer or distributor name, address, phone number; emergency phone number; recommended use; restrictions on use.
- Section 2, Hazard(s) identification includes all hazards regarding the chemical; required label elements.
- Section 3, Composition/information on ingredients includes information on chemical ingredients, trade secret claims.
- Section 4, First-aid measures includes important symptoms/effects, acute, delayed; required treatment.
- Section 5, Fire-fighting measures lists suitable extinguishing techniques, equipment, chemical hazards from fire.
- Section 6, Accidental release measures lists emergency procedures; protective equipment; proper methods of containment and cleanup.
- Section 7, Handling and storage lists precautions for safe handling and storage, including incompatibilities
- Section 8, Exposure controls/personal protection lists OSHA's Permissible Exposure Limits (PELs); Threshold Limit Values (TLVs); appropriate engineering controls; personal protective equipment (PPE).
- Section 9, Physical and chemical properties lists the chemical's characteristics.
- Section 10, Stability and reactivity lists chemical stability and possibility of hazardous reactions.
- Section 11, Toxicological information includes routes of exposure; related symptoms, acute and chronic effects; numerical measures of toxicity.
- Section 12, Ecological information
- Section 13, Disposal considerations
- Section 14, Transport information
- Section 15, Regulatory information
- Section 16, Other information, includes the date of preparation or last revision preparation or last revision.

# SAFETY DATA SHEET

Confirms to OSHA Hazard Communication Standard (CFR 29 1910.1200) HazCom 2012

**GOO  
GONE.**

**Product:** Goo Gone- 2028, 2030, 2030A, 2050, 2053, 2082, 2086, 2087, 2089, 2090, 2092, 2035CLIP, 2095CLIP, 2129, 2139B, 2166D, 2221D, 2223

**Revision Date:** 12-Jun-2018

## SECTION 1 – IDENTIFICATION

### Product Identifier

**Product Name:** Goo Gone

**Product Code:** 2028, 2030, 2030A, 2050, 2053, 2082, 2086, 2087, 2089, 2090, 2092, 2035CLIP, 2095CLIP, 2129, 2139B, 2166D, 2221D, 2223

### Recommended Use of the Chemical and Restrictions for Use

**Recommended Use:** Cleaner

**Restrictions for Use:** Use only as directed.

### Details of the Supplier

**Manufacturer:** Goo Gone  
755 Tri-State Parkway  
Gurnee, IL 60031  
855-364-8135

### Emergency Phone Number

**24-Hour Number:** 1-800-535-5053

**International:** 1-352-323-3500

## SECTION 2 – HAZARDS IDENTIFICATION

### Classification

Hazard Class	Category
Flammable Liquid	4
Skin Sensitization	1
Aspiration Hazard	1

### Label Elements

#### Hazard Symbols(s):

See section 4.3 for explanation of pictograms

**Signal Word(s):** Danger

**Hazard Statement(s):** Combustible liquid. May cause an allergic skin reaction. May be fatal if swallowed and enters airways.

**Precautionary Statement(s):** Keep away from flames and hot surfaces. No smoking. Avoid breathing fume/mist/vapors/spray. Contaminated work clothing must not be allowed out of the workplace. Wear protective gloves/eye protection/face protection. If swallowed: Immediately call a poison center/doctor. Do NOT induce vomiting. If on skin: Wash with plenty of water. Wash contaminated clothing before reuse. If skin irritation or rash occurs: Get medical advice/attention. Store in a well-ventilated place. Keep cool. Store locked up. Dispose of contents and container in accordance with all local, regional, national and international regulations.

### Other Hazards

None known

## SECTION 3 – COMPOSITION / INFORMATION ON INGREDIENTS

Chemical Name	CAS Number	Wt %
Petroleum distillates, hydrotreated light	64742-47-8	60-100
D-Limonene	5989-27-5	1-5
Orange, sweet, extract	8028-48-6	0.5-1.5

The exact percentage (concentration) of composition has been withheld as a trade secret in accordance with paragraph (i) of §1910.1200.

Document No.: 130529-5  
Release Date: 1/10/2014

Page 1 of 5

## 4.2 Labels

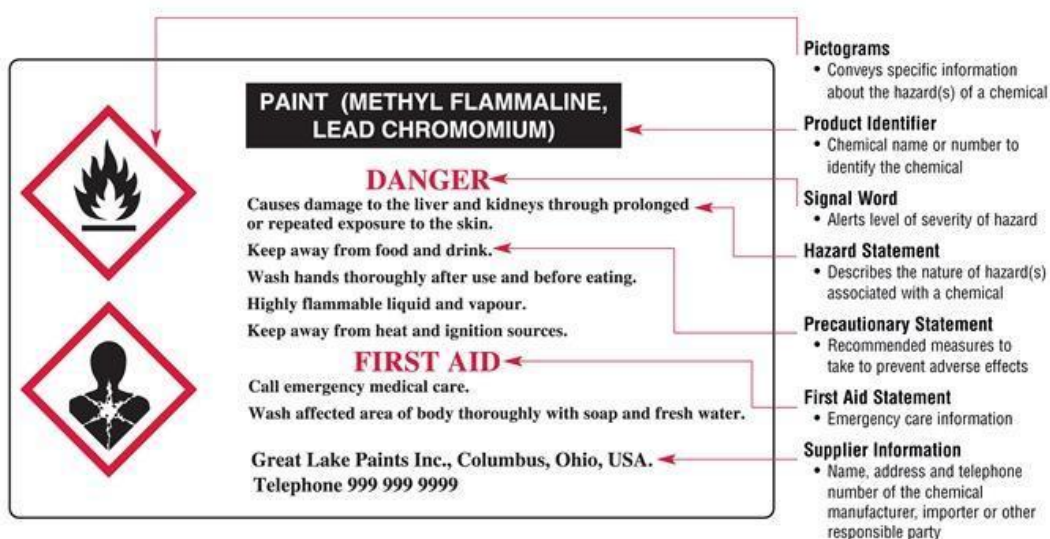

All labels from manufacturers must have the following information:

- Pictograms
- A signal word: “danger” or “warning” or “caution”
- Hazard statements that describe the physical, health, and/or environmental hazards
- Precautionary statements that describe measures to minimize or prevent adverse effects. There are four types – “prevention,” “response,” “storage,” and “disposal.” For example, for a product identified as acutely toxic – oral, we would see the following:

Prevention	Response	Storage	Disposal
Wash ...thoroughly after handling. ... Chemical manufacturer, importer, or distributor to specify parts of the body to be washed after handling.	If swallowed: Immediately call a poison center/doctor/... ... Chemical manufacturer, importer, or distributor to specify the appropriate source of emergency medical advice.	Store locked up.	Dispose of contents/container to... ... in accordance with local/regional/national/international regulations (to be specified).
Do not eat, drink, or smoke when using this product.	Specific treatment (see ... on this label) ... Reference to supplemental first aid instruction. - if immediate administration of antidote is required.  Rinse mouth.		

- The product identifier
- Supplier identification

The following shows a sample label, identifying the required label elements. Supplemental information can also be provided on the label as needed.

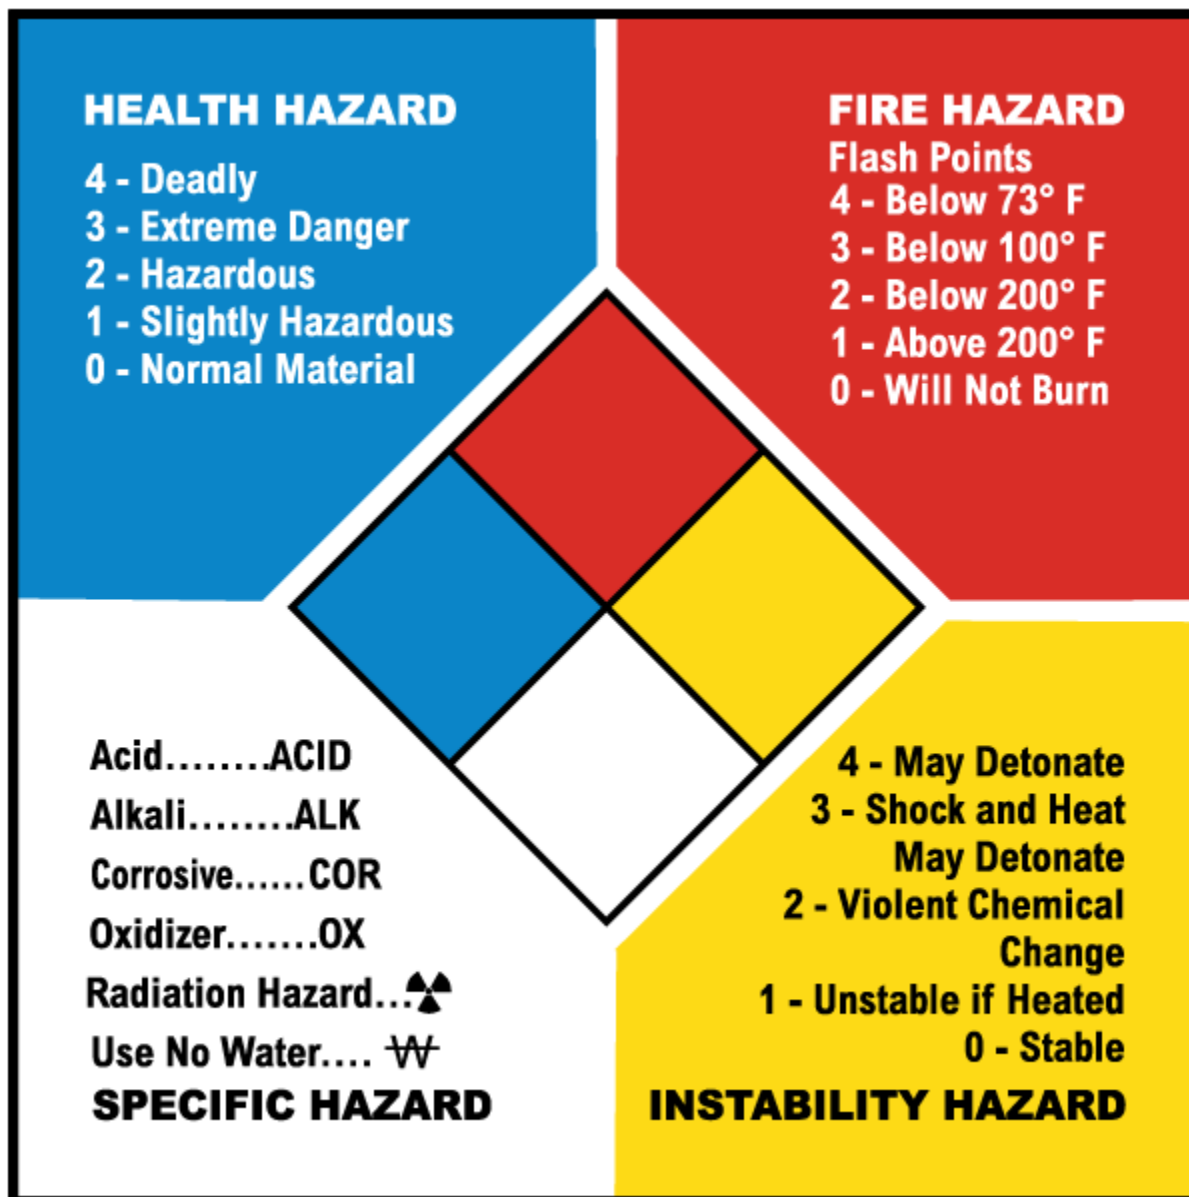

### 4.3 Pictograms and Hazard Classes

<p style="text-align: center;"><b><u>Flame Over Circle</u></b></p>  <ul style="list-style-type: none"> <li>● Oxidizers</li> </ul>	<p style="text-align: center;"><b><u>Flame</u></b></p>  <ul style="list-style-type: none"> <li>● Flammables</li> <li>● Self Reactives</li> <li>● Pyrophorics</li> <li>● Self-Heating</li> <li>● Emits Flammable Gas</li> <li>● Organic Peroxides</li> </ul>	<p style="text-align: center;"><b><u>Exploding Bomb</u></b></p>  <ul style="list-style-type: none"> <li>● Explosives</li> <li>● Self Reactives</li> <li>● Organic Peroxides</li> </ul>
<p style="text-align: center;"><b><u>Skull and Crossbones</u></b></p>  <ul style="list-style-type: none"> <li>● Acute toxicity (severe)</li> </ul>	<p style="text-align: center;"><b><u>Corrosion</u></b></p>  <ul style="list-style-type: none"> <li>● Corrosive to Metal</li> <li>● Skin Corrosion</li> <li>● Serious Eye Damage</li> </ul>	<p style="text-align: center;"><b><u>Gas Cylinder</u></b></p>  <ul style="list-style-type: none"> <li>● Gases Under Pressure</li> <li>● Liquefied Gas</li> </ul>
<p style="text-align: center;"><b><u>Health</u></b></p>  <ul style="list-style-type: none"> <li>● Carcinogen</li> <li>● Respiratory Sensitizer</li> <li>● Reproductive Toxicity</li> <li>● Target Organ Toxicity</li> <li>● Germ Cell Mutagen</li> <li>● Aspiration Toxicity</li> </ul>	<p style="text-align: center;"><b><u>Environment</u></b></p>  <ul style="list-style-type: none"> <li>● Environmental Toxicity</li> </ul>	<p style="text-align: center;"><b><u>Exclamation Mark</u></b></p>  <ul style="list-style-type: none"> <li>● Skin Irritant</li> <li>● Dermal Sensitizer</li> <li>● Acute Toxicity (harmful)</li> <li>● Narcotic Effects</li> <li>● Respiratory Irritation</li> <li>● Eye Irritation</li> </ul>

## 4.4 NFPA Labeling

## 5.0 Employee Information and Training

All regular employees of Reed College who have exposure to hazardous chemicals in the workplace will participate in a training program that will help them recognize, evaluate, and control chemical hazards. This training is scheduled during new employee orientation.

Information includes the following:

- An overview of the requirements in the Oregon Administrative Rules (OAR), Hazard Communication, OAR Chapter 437 Division 2 Subdivision Z.

- The location of Safety Data Sheets and lists of hazardous chemicals present in the employees work areas.
- How to read labels and review SDSs in order to obtain appropriate hazard information, such as chemical and physical properties, physical and health effects, and exposure limits of the hazardous chemicals used in the work area.
- How to determine the presence or release of hazardous chemicals in the work area.
- How to reduce or prevent exposure to hazardous chemicals through work practices, controls, and personal protective equipment.
- Emergency procedures if exposed to a hazardous chemical.

Supervisors will evaluate the effectiveness of the training by observing employees' safe workplace practices and provide additional safety training to employees whenever a new health or physical hazard is introduced into their work area, and whenever necessary.

## 6.0 List of Hazardous Chemicals

Supervisors will keep an up-to-date list of hazardous chemicals used in the area.

- The list must refer to each chemical by the same name(s) that correspond to the Safety Data Sheet and container label.
- This list will be available for review by any employee during any work shift.
- Whenever a hazardous chemical is added or taken from the list, the supervisor must indicate the date and forward the revised list to the Environmental Health and Safety Office.

## 7.0 Hazardous Non-routine Tasks

When an employee performs a non-routine task involving hazardous chemicals, supervisors will inform the employee about each hazardous chemical before work begins. This includes:

- Chemical hazards associated with the task.
- Personal protective equipment and safety measures used to control the hazards.
- Specific emergency procedures used in case of an accident or injury.

## 8.0 Chemical Hazard Determinations

Reed College will conduct chemical hazard determinations in the following circumstances:

- When a chemical reaction of two or more hazardous chemicals forms a new chemical and is intended for use by someone other than the preparer. This is not required if the new chemical is produced in a research laboratory for use within the laboratory.
- The preparer mixes chemicals and believes the hazards of the mixture are significantly different from the hazards of its components.
- If a chemical is prepared under either of these circumstances, the preparer is required to contact the Environmental Health and Safety Office immediately for instructions on how to evaluate the hazards of the chemical.

## Appendix 1: Health Hazard Definitions

**Carcinogen** – a chemical is considered to be a carcinogen if:

- It has been evaluated by the International Agency for Research on Cancer (IARC), and found to be a carcinogen or potential carcinogen; or
- It is listed as a carcinogen or potential carcinogen in the Annual Report on Carcinogens published by the National Toxicology Program (NTP) (latest edition); or
- OSHA regulates it as a carcinogen.

**Corrosive** – a chemical that causes visible destruction of, or irreversible alterations in, living tissue by chemical action at the site of contact.

**Health Hazard** – a chemical for which there is statistically significant evidence based on at least one study conducted in accordance with established scientific principles

**Highly Toxic** – a chemical falling within any of the following categories:

- A chemical that has a median lethal dose (LD50) of 50 milligrams or less per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each.
- A chemical that has a median lethal dose (LD50) of 200 milligrams or less per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between two and three kilograms each.
- A chemical that has a median lethal concentration (LC50) in air of 200 parts per million by volume or less of gas or vapor, or two milligrams per liter or less of mist, fume, or dust, when administered by continuous inhalation for one hour (or less if death occurs within one hour) to albino rats weighing between 200 and 300 grams each.

**Irritant** – a chemical, which is not corrosive, but which causes a reversible inflammatory effect on living tissue by chemical action at the site of contact.

**Physical Hazard** – a chemical for which there is scientifically valid evidence that it is a combustible liquid, a compressed gas, explosive, flammable, an organic peroxide, an oxidizer, pyrophoric, unstable (reactive) or water-reactive.

**Sensitizer** – a chemical that causes a substantial proportion of exposed people or animals to develop an allergic reaction in normal tissue after repeated exposure to the chemical.

**Toxic** – a chemical falling within any of the following categories:

- A chemical that has a median lethal dose (LD50) of more than 50 milligrams per kilogram but not more than 500 milligrams per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each.
- A chemical that has a median lethal dose (LD50) of more than 200 milligrams per kilogram but not more than 1,000 milligrams per kilogram of body weight when

administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between two and three kilograms each.

- A chemical that has a median lethal concentration (LC50) in air of more than 200 parts per million but not more than 2,000 parts per million by volume of gas or vapor, or more than two milligrams per liter but no more than 20 milligrams per liter of mist, fume, or dust, when administered by continuous inhalation for one hour (or less if death occurs within one hour) to albino rats weighing between 200 and 300 grams each.

**Target organ effects** – a target organ categorization of effects may include examples of signs and symptoms, and chemicals that have been found to cause such effects. These examples are not all-inclusive, but they illustrate the range and diversity of effects and hazards found in the workplace, and the broad scope employers must consider in this area.

- **Cutaneous hazards:** chemicals that affect the dermal layer of the body
  - Signs and symptoms: defatting of the skin, rashes, and irritation
  - Chemicals: ketones, chlorinated compounds, organic solvents
- **Eye hazards:** chemicals that affect the eye or visual capacity
  - Signs and Symptoms: tearing or irritation, conjunctivitis, corneal damage
  - Chemicals: organic solvents, corrosives
- **Hematoxics agents that act on the blood or hematopoietic system:** chemicals that interfere with hemoglobin function, depriving the body tissues of oxygen
  - Signs and symptoms: cyanosis, loss of consciousness
  - Chemicals: carbon monoxide, cyanides, insecticides
- **Hepatotoxins:** chemicals that cause liver damage
  - Signs and symptoms: jaundice, liver enlargement
  - Chemicals: carbon tetrachloride, nitrosamines, and chloroform
- **Nephrotoxins:** chemicals that cause kidney damage
  - Signs and symptoms: edema, proteinuria
  - Chemicals: halogenated hydrocarbons, uranium, and cadmium
- **Neurotoxins:** chemicals that have their primary toxic effects on the nervous system
  - Signs and symptoms: narcosis, behavioral changes, muscle weakness, and decrease in motor functions
  - Chemicals: mercury, carbon disulfide, and carbamate insecticides
- **Agents that damage the lung:** chemicals that irritate or damage the pulmonary tissue
  - Signs and symptoms: cough, tightness in the chest, shortness of breath
  - Chemicals: silica, asbestos, and hydrogen chloride
- **Reproductive toxins:** chemicals that affect the reproductive capabilities including chromosomal damage (mutations) and effects on fetuses (teratogenesis)
  - Signs and symptoms: birth defects, sterility
  - Chemicals: lead, DBCP, halogenated pesticides, organic solvents
